

AWS Resource Details:

AWS Account ID	806231808327
AWS Console URL	https://cmcl.signin.aws.amazon.com/console
Console User ID	cmcl
Password	^KAd&S4e

Existing Bastion Host (Jump Box):

Instance Type	t2.micro
Region	Asia Pacific (Mumbai) ap-south-1
Availability Zone	ap-south-1a
Operating System	Amazon Linux 2
AMI ID	ami-09a7bbd08886aafdf
Instance ID	i-03c52e74c31316a0b
Public DNS	ec2-3-7-138-161.ap-south-1.compute.amazonaws.com
Elastic IP	3.7.138.161
Private IP	192.200.10.89
Storage	8 GB SSD EBS (gp2)
Softwares installed	NA
SSH Keypair Name	DealerGaming_key.ppk
SSH Login User	ec2-user

New Application Server – Star Steller (Public Subnet):

Instance Type	t4g.medium
Instance Name	StarStellar-App
Region	Asia Pacific (Mumbai) ap-south-1
Availability Zone	ap-south-1a
Operating System	CentOS Linux 7.9.2009
AMI ID	ami-0b5c298137e260867
Instance ID	i-006bd0e3377cb3c8a
Public DNS	ec2-13-233-3-188.ap-south-1.compute.amazonaws.com
Elastic IP	13.233.3.188
Private IP	192.200.10.6
Storage	20 GB GP3 (vol-01b62f9423e6df683)
Software installed	Apache httpd v2.4.6-97, PHP Version 5.4.16
SSH Keypair Name	StarStellar.pem
SSH Login User	centos
Launch Time	Sat Dec 04 2021 16:24:45 GMT+0530 (India Standard Time)

New Database Server – Star Steller (Private Subnet):

Instance Type	t4g.medium
Instance Name	DBTier-Star Stellar
Region	Asia Pacific (Mumbai) ap-south-1
Availability Zone	ap-south-1c
Operating System	CentOS Linux 7.9.2009
AMI ID	ami-0b5c298137e260867
Instance ID	i-0a2dbbe80b217c617
Public DNS	NA
Elastic IP	NA
Private IP	192.200.20.154
Storage	20 GB GP3 SSD (vol-03bb25b8650a3534a)
Software installed	MariaDB v 5.5.68
MariaDB root password	cmsZKAhWjC93gK5h
phpMyAdmin URL	http://13.233.3.188/nothing
SSH Keypair Name	StarStellar.pem
SSH Login User	centos
Launch Time	Sat Dec 04 2021 16:22:57 GMT+0530

Developer Access to AWS Console:

Console URL	https://cmcl.signin.aws.amazon.com/console
IAM User	starsteller
IAM Password	e8_*Z_gDkC?t@\$VM
Access key ID	AKIA3XNZJDFDQONUWT4I
Secret access key	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

How to connect to instance:

- 1) Install MobaXterm Personal Edition - <https://mobaxterm.mobatek.net/download.html>
- 2) Add SSH Session with either elastic IP or public DNS of the App Server as the hostname and "ec2-user" as the username, in advanced SSH settings load the key pair file - StarStellar.pem
- 3) Enable SSH agent forwarding in MobaXterm - <http://docs.gcc.rug.nl/hyperchicken/ssh-agent-forwarding-mobaxterm/> and load the attached keypair file - StarStellar.pem
- 4) SSH to Database Server using the private IP (192.200.20.154) & SSH Agent Forwarding – from Bastion Host or Application Server –

```
ssh -A centos@192.200.20.154
```

- 5) You will be logged into the Database Server. This server has internet access via NAT gateway.
- 6) See the file – "/home/centos/Serverlist.txt" on the App Server
